Solution:	Spring-driven cable reel in white housing
Article:	210005
Quantity:	10
Areas of application:	fire brigade, civil protection, army, technical assistance organisations or also in industry and in building industry

Starting situation

The bus deck right next to Chur station is the ideal starting point for excursions throughout Grisons. The yellow buses take passengers to the smallest villages, drive over the highest passes and make the most remote valleys accessible. A simple charging facility is needed to guarantee the power supply. The power can be plugged in simply and directly «from above» by means of spring-driven cable reels, so that approaching buses are not obstructed.

No unnecessary obstacles – thanks to spring-driven cable reels from GIFAS.

Customer benefits

- individual fitting options possible; all cable reels with thermal protection
- wide range available
- individual and personal consultation by our sales team
- all individual parts are available as spare parts for maintenance/repairs
